

Function1

20 Practice Questions (Beginner → Advanced)

◆ Beginner

1. Write a function to print "Hello, World!".
2. Write a function that takes a name and prints "Hello, <name>".
3. Write a function to add two numbers and return the result.
4. Write a function to check if a number is even or odd.
5. Write a function to calculate the square of a number.

◆ Intermediate

6. Write a function to calculate factorial of a number.
7. Write a function to reverse a string.
8. Write a function to count vowels in a string.
9. Write a function to check if a string is palindrome.
10. Write a function to return the maximum of three numbers.

◆ Advanced Practice

11. Write a function to generate Fibonacci series up to n.
12. Write a function to calculate GCD of two numbers.
13. Write a function to calculate LCM of two numbers.
14. Write a function to sort a list without using sort().
15. Write a function to check if a number is prime.
16. Write a function to count frequency of characters in a string.
17. Write a function to return longest word in a sentence.
18. Write a function to remove duplicates from a list.
19. Write a function to flatten a nested list.
20. Write a function to calculate sum of digits of a number.

● HackerRank-Level (inside practice set)

- HR1: Write a function to find the second largest number in a list.
- HR2: Write a function to check if two strings are anagrams.
- HR3: Write a function to calculate the average of numbers in a list.
- HR4: Write a function to rotate a list by k positions.
- HR5: Write a function to merge two sorted lists.

● LeetCode-Level (inside practice set)

- LC1: Write a function to implement binary search.
- LC2: Write a function to check if parentheses are balanced.
- LC3: Write a function to find two numbers in a list that add up to a target (Two Sum).
- LC4: Write a function to remove duplicates from a sorted list.
- LC5: Write a function to find the longest common prefix among strings.
